Provincetown (Barnstable)

Provincetown is a town in Barnstable County with 1,029 residents aged 65 and older. Compared to state average rates, older residents show better health outcomes with lower rates of tooth loss, atrial fibrillation, chronic kidney disease, congestive heart failure (CHF), diabetes, glaucoma, hypertension, osteoporosis, prostate cancer, stroke, schizophrenia, and high cholesterol. However, they report higher rates of pressure ulcer, substance use disorder, depression, anxiety disorder, and PTSD. Older residents are more likely to engage in physical activity and have annual dental exams. Community resources to support healthy aging include a COA, one public library, five primary care providers, and one skilled nursing facility.

NOTES

TECHNICAL NOTES

*For more information on data sources, measures, and methodology used in the 2025 Massachusetts Healthy Aging Data Report see our technical documentation at (healthyagingdatareports.org). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.
