

Weston (Middlesex)

Weston is a town in Middlesex County with 2,491 residents aged 65 and older. Compared to state average rates, older residents fare better on some healthy aging indicators with lower rates of tooth loss, asthma, chronic kidney disease, chronic obstructive pulmonary disease (COPD), diabetes, high cholesterol, hypertension, liver disease, substance and tobacco use disorders, depression, anxiety disorder, PTSD, and schizophrenia. However, they have higher rates of atrial fibrillation, benign prostatic hyperplasia, breast cancer, cataract, glaucoma, osteoarthritis/rheumatoid arthritis, and osteoporosis. They are more likely to take the health promotion steps of doing physical activity, meeting the CDC guidelines for aerobic and strength training, receiving flu and shingles vaccines, having a regular doctor and annual dental exam. Community resources to support healthy aging include a COA, one assisted living facility, one public library, one skilled nursing facility, and six primary care providers.

POPULATION CHARACTERISTICS	Significantly different than state rate	Community estimate	State estimate
Total population (all ages)		11,759	6,984,205

% 65+ hospice users		2.7%	2.8%
% 65+ hospice users as % of decedents		39.3%	44.0%

NOTES

TECHNICAL NOTES

*For more information on data sources, measures, and methodology used in the 2025 Massachusetts Healthy Aging Data Report see our technical documentation at (healthyagingdatareports.org). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.
