Bourne (Barnstable)

Bourne is a town in Barnstable County with 6,022 residents aged 65 and older. Compared to state average rates, older residents have significantly lower rates of tooth loss, diabetes, peripheral vascular disease, and schizophrenia. However, they have higher rates of atrial fibrillation, benign prostatic hyperplasia, cataract, chronic obstructive pulmonary disease (COPD), fibromyalgia/chronic pain/fatigue, heart attack, hypertension, osteoarthritis/rheumatoid arthritis, and high cholesterol. They are more likely to take the health promotion steps of engaging in physical activity, meeting the CDC guidelines for aerobic activity, receiving pneumonia vaccinations, and having annual physical and dental exams. Community resources to support healthy aging include a COA, two assisted living facilities, one community health center, one hospital, 28 primary care providers, two skilled nursing facilities, one public university or community college, and a public library.

POPULATION CHARACTERISTICS	Significantly different than state rate	Community estimate	State estimate
Total population (all ages)		20,455	6,984,205
Population 60 years or older as % of total population		37.3%	23.8%
Total population 60 years and older		7,627	1,661,076
Population 65 years or older as % of total population		29.4%	17.1%
Total population 65 years and older		6,022	1,195,589
% 65-74 years		60.5%	58.4%
% 75-84 years		29.4%	28.1%
% 85 years or older	*	10.1%	13.4%
% 65+ population who are female		53.3%	56.2%
% 85+ population who are female		57.3%	66.6%
Race and ethnicity of the population 65+

% 65+ hospice users		3.0%	2.8%
% 65+ hospice users as % of decedents		49.1%	44.0%

NOTES

TECHNICAL NOTES

*For more information on data sources, measures, and methodology used in the 2025 Massachusetts Healthy Aging Data Report see our technical documentation at (healthyagingdatareports.org). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.
